

# Planning Digital Preservation for e-Health using Preservation Network Models

**Michael Wilson**, Esther Conway, Arif Shaon,  
Vasily Bunakov

Science and Technology Facilities Council  
United Kingdom

Science & Technology Facilities Council

**e-Science**

1) patient;

Period: patient's lifetime;

Purpose: to improve medical care

2) hospital;

Period: defined by regulation,

Purpose: conform to regulations  
and avoid penalty fines

3) patient's family;

Period: successive generations;

Purpose: to identify genetically  
transmitted illnesses

4) public;

Period: indefinitely,

Purpose: data for epidemiology studies.

- Health Records
  - Moving from paper to computer
  - Remain PDF style paper forms

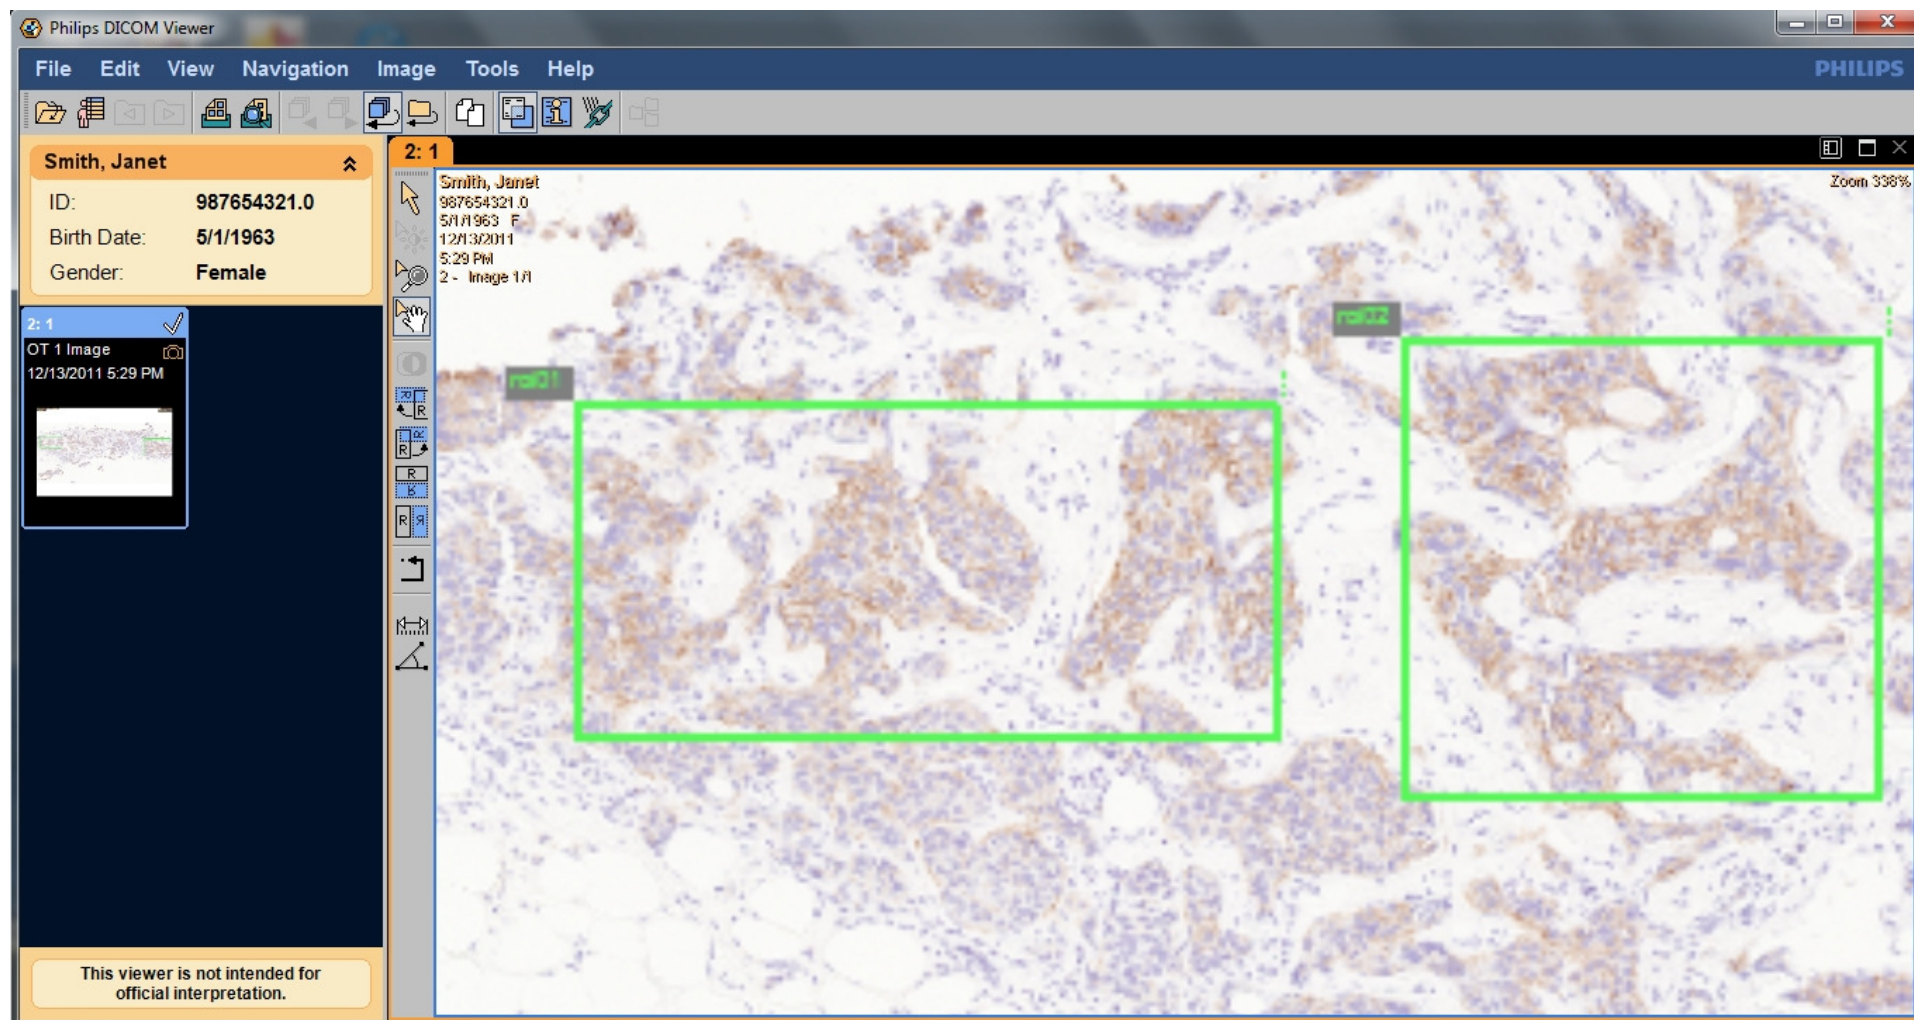

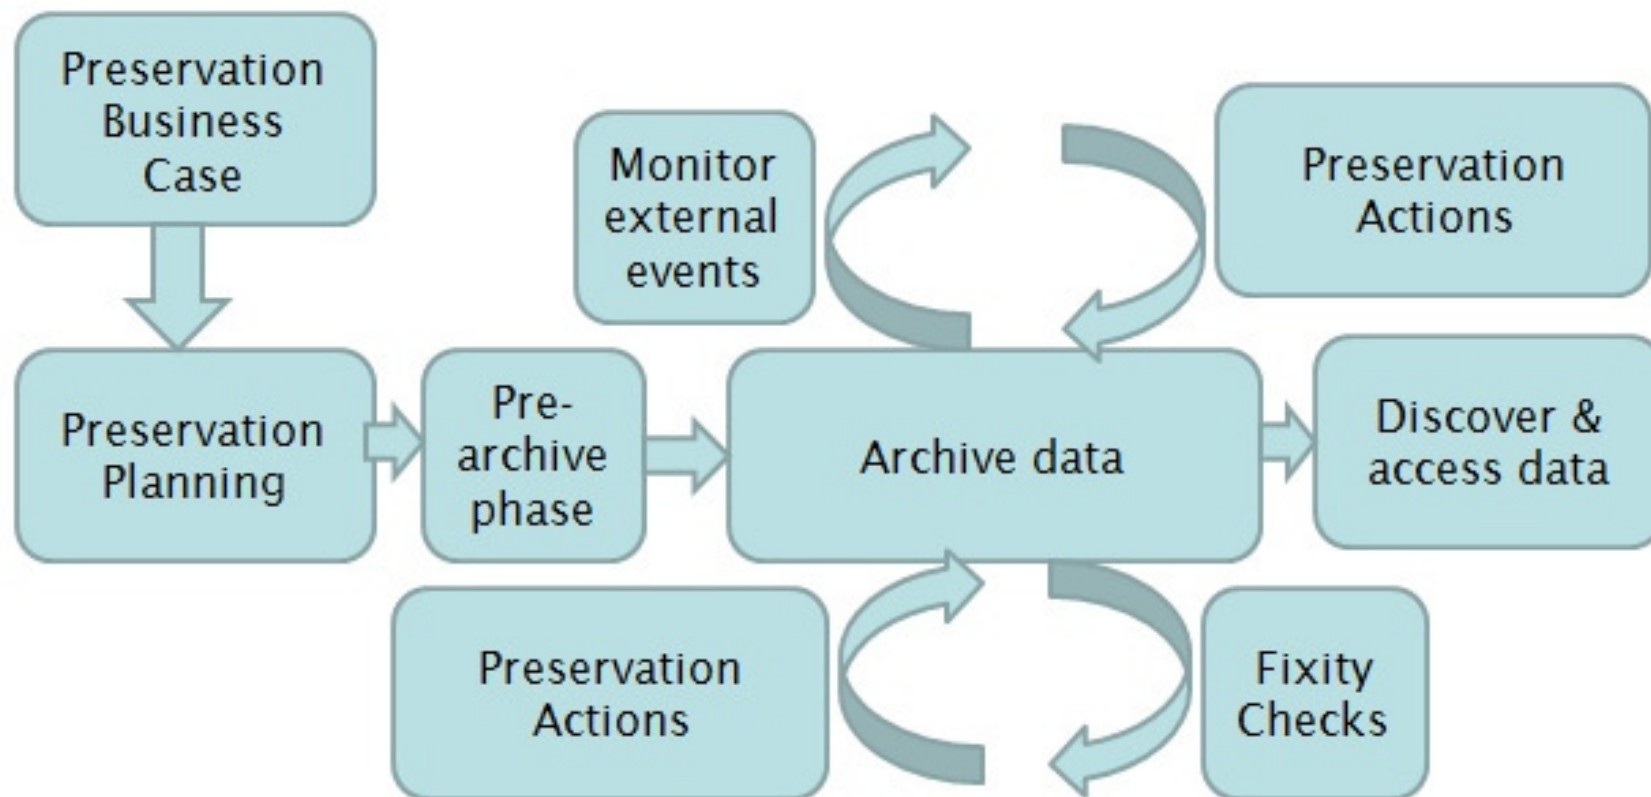

**HEALTH RECORD**

PLEASE ANSWER ALL QUESTIONS. Type or print answers. This information is confidential and will not be released without your written consent. Return this form to: University of the Incarnate Word, Health Services, 4301 Broadway, San Antonio, Texas 78209, Phone (210) 829-6017.

- Records associated with many files
- Pathology images in DICOM format – DICOM viewer ?

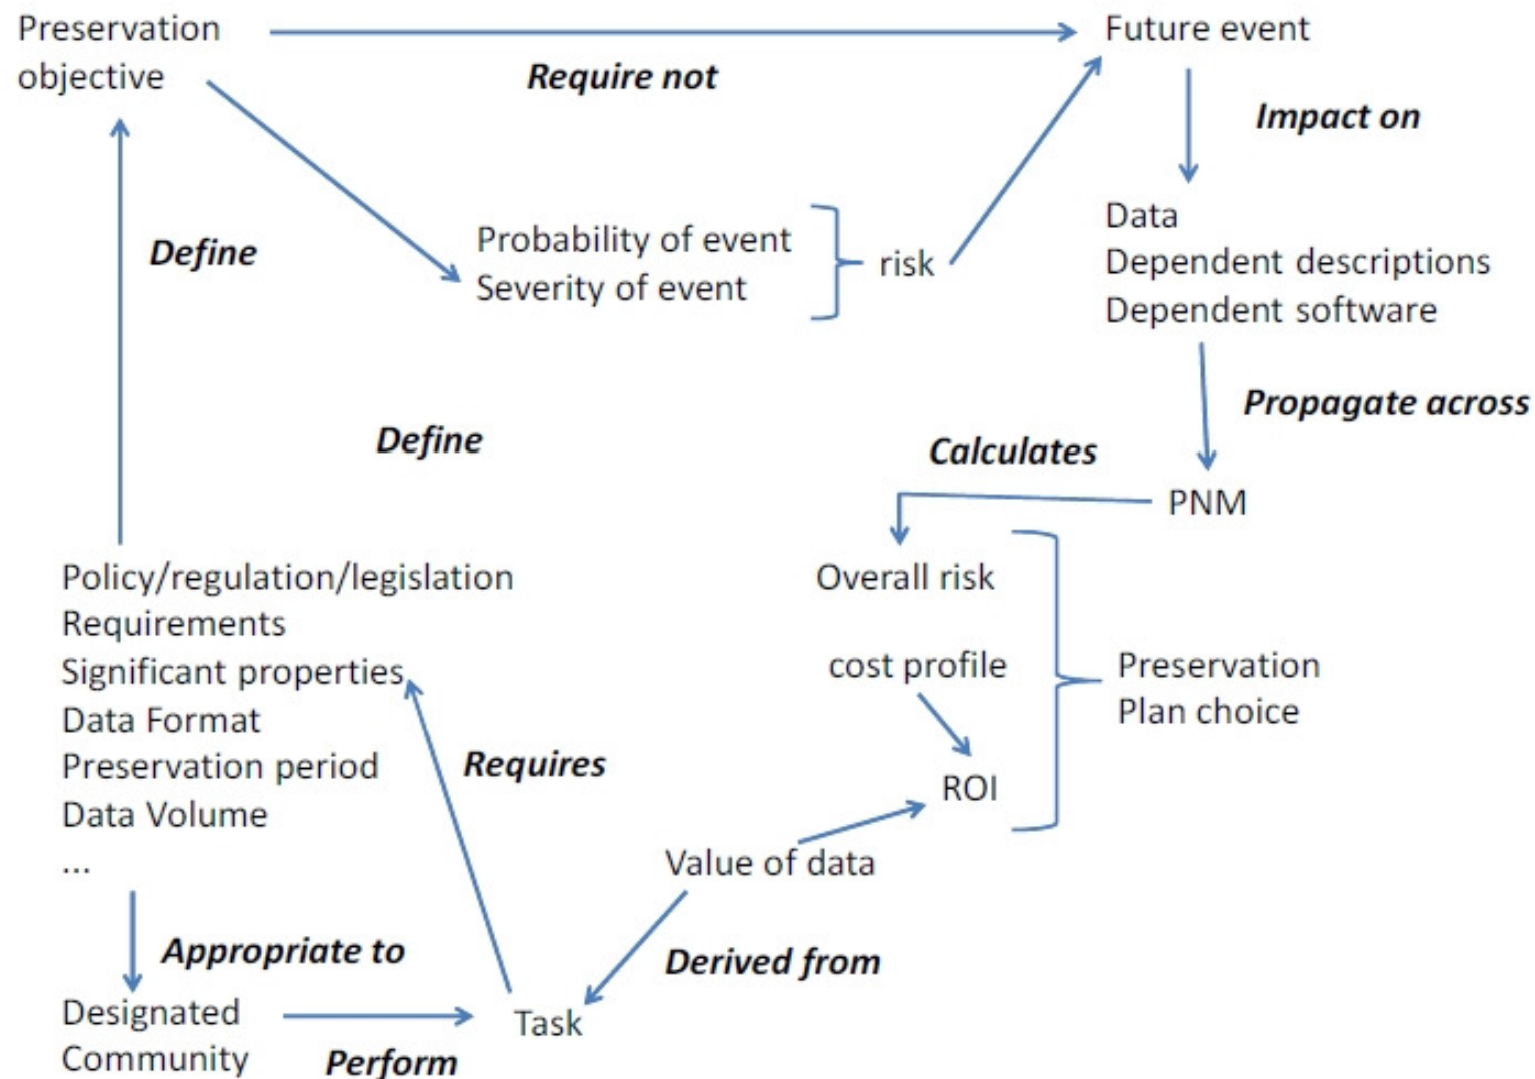

- 1) preserve the data in its current format and assume that it will be usable when required (archive strategy);
- 2) preserve the data in its current format and a description of the format which can be used by a generic emulation tool to use it when required, and assume that the emulation tool will be available when required (emulation strategy);
- 3) migrate the data to one of a few supported formats which can be migrated again later if potential format obsolescence is identified in order to ensure that the data is always in a format which can be used (migration strategy);
- 4) store the data and the tools to use them, and the libraries, operating systems, etc. which those tools depend on, and virtualise the platform to run the tools on the data when required (virtualisation strategy).

- Tools are under development to support this methodology:
  - 1) PNM editor to generate RDF representations of the preservation network model;
  - 2) planning tool to generate alternative preservation plans from the PNM;
  - 3) cost modelling tool to estimate the cost of each plan;
  - 4) ROI tool to subtract cost from value of data to give ROI;
- **Weakness – how to estimate potential future value of data - probability of occurrence of reasons and their value.**
